

## Aussie Shade & Hot Houses

### Installing Roof Rafters

1. Start the top of the roof rafter onto the fitting. Fitting should be orientated correctly during installation with the slotted fitting to go into the rafter. Master, Space Master and Maxi rafters are mark at the top with a "T".
2. Locate the bottom of the rafter onto the top of the wall fitting. Top wall fittings should be installed with the 25mm fitting faced up to take the rafter end.

3. Using the rubber mallet, hit the rafter on the outside until the rafter is fully seated on to both fittings. You may need to hit it repeatedly and with some force to fully seat the fittings.
4. Repeat for all rafters
